

Bilal Azhar

FULL STACK WORDPRESS DEVELOPER

Hi, I'm Bilal Azhar

I'm a seasoned front-end developer with a strong focus on WordPress and its various features. For me, communication plays an instrumental role in the development process and I strive to keep my clients involved at every stage. My penchant for detail allows me to balance form and function every step of the way.

Lead WordPress Developer

Megasafe megasafestg.wpengine.com

Megasafe is a company based in the US which specializes in Bank Vaults, Gun Safes, Home Safes to name a few. They wanted to have their new website built in a way so it would be easy to manage and update. On my suggestion we built their new website in WordPress using Elementor as the builder as it is very easy to use Elementor to update content and images on a website. The website is also integrated with Zakeke to provide 3D and AR views, initially the scope was to allow a customer to customize their safe using the Zakeke configurator.

Front End Developer

Cancer Tutor cancertutor.com

Cancer Tutor is the leading voice in natural cancer treatment and prevention. I built the front-end using Bootstrap and jQuery along with a sleek mouse repell JS on the homepage. The back-end was built on WordPress with custom post types.

Sr. WordPress Developer

#Cover Valet covervalet.com

Built using WP Bakery builder along with some 3rd party tools and APIs. Also integrated WooCommerce for ecommerce functionality. Besides this, I have also customized the woocommerce templates and code snippets to meet the client requirements.

WordPress Plugin Developer

Palo Alto Builders paloaltobuilders.com

Palo Alto Builders is a construction company, the website is a showcase of their various remodeling projects etc. The project was completed within a week using Elementor Pro while keeping in mind WordPress hierarchy. The dynamic content was catered for using Advanced Custom Fields(ACF) and custom post UI plugin.

Education

BSCS

Capital University of Science and Technology

Jun 2011 – Sep 2015
